

The Functional Nanostructures and Advanced Imaging Lab is looking for M.Sc. and Ph.D. students

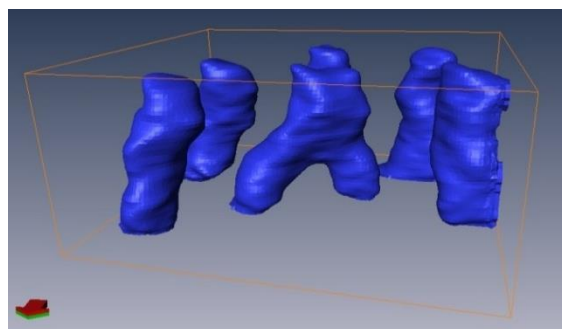

- How can polymers enable the next generation of semiconductor patterning?

- How can nanostructures be harnessed to improve water quality?

- How can we understand and control engineered 3D nanostructures?

If these questions interest you- we invite you to join a new and exciting lab that combines multidisciplinary research in organic and inorganic materials, device fabrication and testing, and state of the art electron microscopy and image analysis.

We are looking for outstanding and highly motivated Chemical Engineering, Materials Science and Engineering, or other related background M.Sc. and Ph.D. students that enjoy working in a team environment
